| Section 15.212 Modular Transmitters | | | | | | | |
| Request for Modular Approval 🗵 Request for Limited Modular Approval 🗆 | | | | | | | |
| | | Requirements | | EUT Conditions | Comply(Y/N) | | |
| Single Modular Approval Requirements | | | | | | | |
| 1 | The radio elements of the modular transmitter must have their own shielding. The physical crystal and tuning capacitors may be located external to the shielded radio elements. Refer to external photos. This module has shield cover. | | | | | | |
| 2 | The modular transmitter must have buffered modulation/data inputs (if such inputs are provided) to ensure that the module will comply with part 15 requirements under conditions of excessive data rates or over-modulation. | | All inputs to the modules are buffered through logic or microprocessor inputs. Refer to Schematics. | Y | | | |
| 3 | | lar transmitter mu wer supply regulati | | Module uses 3.3 V power by the terminal product. Refer to user manual. | Y | | |
| 4 | with the ant requirement 15.204(c). The permanently "unique" connections antenna, in "professional §15.203 is recan apply to | ar transmitter must cenna and transmission is of §§15.203, 15.20. The antenna must expressed attached or enantenna coupler between the module including the cable at installation, provinct applicable to module including the capplicable to module at a complete including the capplicable to module at a capplicable at a | on system (24(b) and either be imploy a (at all e and the e). The vision of dules but approvals | The module uses the external antenna with I-PEX connector, the applicant provided two external antenna for testing, the gains are both 3.0dBi, Refer to the report. | Y | | |
| 5 | | ılar transmitter n stand-alone config | | The modular transmitter is connected to the | Υ | | |

i.e., the module must not be inside controlled board when another device during testing for compliance with part requirements. Unless the transmitter module will be battery powered, it must comply with the AC line conducted requirements found in §15.207. AC or DC power lines and data input/output lines connected to the module must not contain ferrites, unless they will be marketed with the module (see §15.27(a)). The length of these lines shall be the length typical of actual use or, if that length is unknown, at least 10 centimeters to insure that there is no coupling between the case of the module and supporting equipment. Any accessories, peripherals, or support equipment connected to the module during testing shall be unmodified and commercially available (see §15.31(i)).

testing. Please refer to setup photo.

6

If using a permanently affixed label, the modular transmitter must be labeled with its own FCC identification number, and, if the FCC identification number is not visible when the module is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. This exterior label can use wording such as the following: "Contains Transmitter Module FCC 2AIUZ-MJP900-A2" similar Any wording that expresses the same meaning may be used. The Grantee may either provide such a label, an example of which must be included in the application for equipment authorization, or, must provide

Refer to the lable.

| | adequate instructions along with the module which explain this requirement. In the latter case, a copy of these instructions must be included in the application for equipment authorization. | | |
|---|---|-----------------|---|
| 7 | The modular transmitter must comply with any specific rules or operating requirements that ordinarily apply to a complete transmitter and the manufacturer must provide adequate instructions along with the module to explain any such requirements. A copy of these instructions must be included in the application for equipment authorization. | Refer to manual | Y |
| 8 | The modular transmitter must comply with any applicable RF exposure requirements in its final configuration. | Refer to manual | Υ |

Sincerely Yours,
